

### PROGUARD SHEET MATERIAL ACCESS HATCH

Product Code	Pricing Unit	Colour	Dimensions	Pack Quantity	Pallet Quantity
PTSMH	Each	RED	1400MM X 175MM	1	400

#### Product Description:

Proguard Sheet Material Access Hatches are a simple and effective way of reducing the hazard of transporting bulky sheet materials between floors on construction sites. The narrow opening prevents operatives from falling through the opening when in use and allows plasterboard and other sheet materials to be passed straight up, without having to carry them up staircases.

They are constructed from high quality steel, with stainless steel hinges to ensure they are capable of withstanding heavy use across multiple sites.

#### Benefits:

- Reusable
- Durable steel construction
- Independently tested SWL – 4 tonnes
- Stainless steel hinges – can be stored outside without seizing up.
- Can be removed once redundant.
- Keep workers safe from falling through unprotected openings

#### Application:

Identify an area of the upstairs floor deck that has suitable clearance to move and stack material. Mark out and cut the installation slot in the deck. Place the hatch in the slot, and secure with suitable screws. Ensure that the lid of the hatch is closed when not in use.

#### Data:

Dimensions	
Outside dimensions	1400mm x 175mm
Opening dimensions	1350mm x 125mm
Installation floor opening	1360mm x 135mm
Weight	10kg
